

User Stories

- **As a new user**, I want an age-gate and geoblock check *before* wallet connect so I never hit compliance walls later.
- **As a bettor**, I want a hard stop if I exceed my daily wager cap so I can manage my risk responsibly.
- **As an admin**, I want the frontend to auto-fetch the latest implementation ABI when contracts are upgraded so I don't redeploy the UI.
- **As a UX designer**, I want real-time event-based UI updates (no polling flicker) so the round countdown and status feel instantaneous.
- **As a cautious user**, I want USD-denominated gas estimates and Polygonscan links so I can audit each transaction.
- **As a visually impaired user**, I want full keyboard navigation and ARIA annotations so I can participate without a mouse.
- **As a power bettor**, I want a one-click "Claim all" for past rounds to avoid tedious clicking.
- **As an operations lead**, I want Lighthouse CI in the pipeline to enforce our performance budgets and catch regressions early.
